SOLUTIONS FOR YOUR IT NEEDS

Increase your impact and expand your reach. Take advantage of the cloud to help your organization grow.

At Bluehawk, we are committed to maximizing the potential of your SharePoint environment. We offer the best SharePoint solutions and practices in the industry; from highly advanced integrations, business forms, and workflow solutions, to customized SharePoint apps and cloud migrations, we can do it all.

We kindly welcome non-profit, educational, and public organizations to consult with us regarding upcoming SharePoint development, migration, or integration projects.

Our Capabilities

We offer custom solutions based on your needs and environment. We develop solutions that respond as your organization's needs change by creating reusable - rather than single-purpose - components. We consider long-term strategy and tradeoffs, such as growth, organizational shifts, and the evolving technology landscape.

SharePoint Consulting

Whether it is implementing market-leading solutions or creating a customized plan to address your organization's specific needs, our team has the expertise to provide a proven foundation for successful execution.

SharePoint Custom Applications

We create custom SharePoint applications on premises or in the cloud. Our solutions can integrate existing business systems with SharePoint, automate your business processes with forms and workflows, or meet any other challenge, whether through custom development or no-code solutions.

Web Content Management

We provide full development of public-facing websites on both SharePoint or SiteCore, including information architecture, visual design, branding, and content migration.

Mobile App Development

Our company creates solution architecture and infrastructure for both the iOS and Android platforms. Our solutions focus on user experience, which results in higher rates of usership and a quicker speed of adoption.

UI/UX Design

With a solid backing in user-centered design to guide our decisions, our expertise allows us to bring the client's vision to life. Our creative and technical teams work together to produce an end result that maximizes the overall experience users will have with our client's brand.
